Home page

Home page consists of single page having two input sections. The page is designed in such way that user gets two options to get the result.
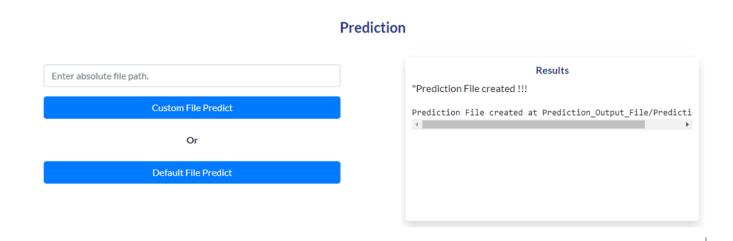

Option one is "Custom File predict", in this option user can give path of the files for which they want to make predictions.

Option two is "Defaulf File predict" in this option the predictions are being made for the files kept on a default path.

This is how Home page looks like:-

Prediction

Enter absolute file path.

Custom File Predict

Or

Default File Predict

Results

After selecting any of the above options and submitting, the following page opens –

Prediction

Enter absolute file path.	**Results**
Custom File Predict	"Prediction File created !!!
Or	Prediction File created at Prediction_Output_File/Predicti
Default File Predict	

In the "Results" section, it is saying that prediction file is created at a predefined location in csv format.
User can go to that location and check for the file containing prediction results.
